

Use Case: Create Task [Critical]

Use Case Name : Create Task

Scope : Personal Task Management System

Level : User goal

Primary Actor : User

Stakeholders and Interests

- User: wants to create tasks to track work and activities.
- System: must store the task correctly and record activity history.

Preconditions

- System is running.
- User is authenticated.

Postconditions

- New Task object exists in TaskDB.
- Task has title, optional description, priority, optional due date.
- Task status = open.
- Task creation date is recorded.
- ActivityEntry is created and stored in ActivityHistory.

Failure Postconditions

- No task is created.
- No activity entry is recorded.

Main Success Scenario

1. User selects Create Task.
2. System prompts for task information.
3. User enters title, description (optional), priority, due date (optional)
4. User confirms creation.
5. System validates input.
6. System creates new Task.
7. System stores Task in TaskDB.
8. System records ActivityEntry ("Task created").
9. System confirms success to user.

Failure Scenario 1: Missing Title

At Step 5 : Title is empty or null.

System response

- System displays error: "Title required".
- Task is not created.
- Use case ends.

Failure Scenario 2: Invalid Due Date

At Step 5 : Due date is invalid format or earlier than creation date.

System response

- System displays error: "Invalid due date".
- Task is not created.
